

Camera Sign In - Windows Hello Setup

Privacy concerns?

- Scanning your face is not mandatory. It is just one of the ways you can log in to your screen's Windows (PC) machine.
- When you do scan your face, you are asked to give explicit consent for Windows to use it.
- Windows is scanning the topography of your face, stores it locally and encrypted, and it only sends "yes/no" information to Microsoft whether your login worked or not.
- Nobody can access your "face scan" file.

How to set up the face recognition function on the Interactive Screens:

Revision #24
